

Envirotech Clean Air's Continuous Education & Training for 2010

Envirotech Clean Air Inc., New England's leading provider of Clean Air Services, proudly maintains a staff that is trained to the most rigorous and current industry standards. This year so far the employees have received refresher courses and certifications in 4 areas: safety, mold remediation, air duct cleaning, and the new EPA lead regulations (RRP).

- **Safety** re-training and certification was provided to all employees in 2010 under the US OSHA Federal Safety Program.
- **Mold remediation** was updated in 2010 in two separate courses presented by national industry leaders in environmental education. These classes were attended by all employees: (1) the Mold Remediation Technician Refresher Course presented by RK Environmental and (2) the Restoration Industry Association's (RIA) Mold Refresher Course offered by Wonder Makers Environmental.
- **Air duct cleaning** has been a specialty of Envirotech Clean Air for 22 years. We maintain the largest number of NADCA certified Air Systems Cleaning specialists (ASCS) in New England. This year our training has produced six new specialists certified at the technician level. Two employees recently earned the advanced NADCA certification, Ventilation System Mold Remediation (VSMR) and two employees earned the title of Certified Mechanical Hygienist (CMH) from the Restoration Industry Association (RIA).
- **Lead** regulations from the US EPA have changed this year. Our lead Technicians and Project Managers have all earned the title Certified Lead Restorer.

Company President Dan Greenblatt said, "As a result of our continuing attention to employee education, we are confident that we maintain the best-trained workforce available for our projects in homes and the workplaces."
